Aug 12, 2024

Figure 1: Accuracy of Topic Predictions vs. Prompt. Accuracy = $P[\hat{Y} = Y^*] = \frac{1}{10k} \sum_{i=1}^{10k} 1\{\hat{Y}_i = Y_i^*\}$

Proxy on the LHS

Figure 2: Ordered $\hat{\beta}$ vs. Prompt. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$

Figure 3: Ordered t-scores vs. Prompt. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$

Figure 4: Bias Density Plots by Proportion of Training Samples. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$

Figure 5: Standardized Bias Density Plots by Proportion of Training Samples. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$

Figure 6: Bias Density by Model and Proportion of Training Samples. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$

Figure 7: Standardized Bias Density by Model and Proportion of Training Samples. Proxy on the LHS:
 $Y = \beta_0 + \beta_1 V$

Figure 8: MSE Empirical CDF by Proportion of Training Samples. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$

Figure 9: MSE Empirical CDF by Model and Proportion of Training Samples. Proxy on the LHS: $Y = \beta_0 + \beta_1 V$
