Headlines Completion

- **Number of Observations:** 20,000.
- **Cleaning:** For responses missing the provided part of the headline, we append it. If a response starts differently from the provided headline, we leave it as is. Both the true and LLM headlines are cleaned by removing **non-alphanumeric** characters and converting everything to lowercase.
- **Embedding Model:** Cleaned headlines are embedded using OpenAI’s `text-embedding-3-small` model, with an embedding size of 1536.

Examples of Successful Completion

Here are 10 examples where GPT-4o is considered to successfully complete the bill summary. Specifically, the cleaned responses are identical to the cleaned true summaries.
